Homemade Power Plant - Homemade Power Guide

The [Homemade Power Plant](#) guide claims to show you how to build your own windmill and solar panel for under \$200, leading to a possible reduction of your electricity costs by 80% or even eliminating them entirely.

Unless you've been living in isolation, you've been hearing a lot about wind power lately.

I'm sure you've seen, or heard, the T. Boone Pickens energy plan which proposes using wind power.

Most people have never thought about using wind power, and solar power, to create their own personal homemade power.

That's why this product caught our eye, it teaches people how to generate their own electricity, for little cost.

It sounds great, creating your own wind power home, and reducing your electricity bill to almost zero, or even selling electricity back to your utility company - who wouldn't like to do that.

But, is it really feasible for the majority of home owners?

Frank Patrick took his interest in developing natural energy, and built homemade power systems for his home. His electricity generating power systems worked so well for him, that he decided to offer his plans to the public.

His step by step manual will help you build your own wind and solar electricity generators, using parts you can get at your local hardware store.

Actual Customer Feedback:

Hi Frank,

I just want to thank you for being my guardian angel!

You heard me right. That's because your book has protected me against my monthly \$430 energy bill. Thanks to your guide, now I can save up to \$288 each month with my own windmill that I built with the help of a couple of friends.

All of us had no mechanical experience but we didn't need any! Your plain and simple guide made it easy to follow the instructions.

*Thanks again,
Christine*

Letter from Tom and Linda:

We noticed we were spending quite a lot on our electricity bill and were trying to figure out how to spend less.

...Luckily, we heard from some of our friends how they installed their own solar power generator and/or windmill to give them FREE energy, by using a guide they bought from you.

It's been a full year now since then and we'd like to give you a BIG THANK YOU for helping us save \$3,157 so far!

Tom and Linda Donovan

Our Research on The Homemade Power Plant Guide:

According to the general online consensus (where research is based on unbiased, non-vested comments & articles), it appears people are very happy with the results achieved from the HomemadePowerPlant guide.

The Homemade Power Plant, homemade power guide, is a great resource for those who are wanting a step by step guide to building a windmill power generator, or building solar panels from home.

	<p>Verdict:</p> <p>Alternative forms of energy generation is going to be a hot industry over the next several years. How about cashing in on this boom by building homemade wind power generators for you, family, neighbors, friends and customers for profit.
